July 29, 2002

To Whom It May Concern:

I am delighted to confirm that Dr. Katerina Glindemann served on the faculty in the Department of Restorative Dentistry at the Harvard School of Dental Medicine as a Clinical Assistant from October 1, 1999 through June 30, 2002.

Dr. Glindemann was a pleasure to have as a member of the department. She quickly adapted to the case-based learning environment at HSDM and taught restorative dentistry, as well as periodontology, in the preclinical lab and in the teaching practice to third and fourth year dental students. She frequently served as an Examiner in restorative dentistry and periodontology in the Oral Comprehensive Examinations for the third and fourth year dental students.

In addition to being an excellent teacher, Dr. Glindemann participated in several research projects involving implants and bone regeneration techniques. While at Harvard, she was also able to conclude her own independent research project, studying the effects of uncontrolled diabetes on osseointegration.

Dr. Glindemann also attended many lectures and participated in continuing education courses related to prosthodontics, periodontology and implant dentistry.

I wish Dr. Glindemann great success as she returns to Germany to further her career in dentistry.

Sincerely,

H. P. Weber, DMD
Raymond J. and Elva Pomfret Nagle Professor of Restorative Dentistry
